GENESYS INTERNATIONAL

HD-ADAS Maps, the Tata Motors Anchor & the Mapping-Peer Question

A Company Deep-Research Brief

Wall-Street-grade due diligence on Genesys International ahead of the operator's single-name capital test. Reads management, the Tata Motors HD-ADAS anchor thesis, the GIS-mapping execution risk surface, and the fundamental-discipline filter -- and stamps the answer.

PREPARED FOR	WORKSTREAM	DATE
Sparcho	**Deep-Research**	**26 April 2026**

Mode: PRE-DEPLOYMENT DUE DILIGENCE -- companion to the 260426 TANLA brief; supports the broader single-name test decision. NOT a recommendation.

Anchor protocols: AGENTS/DEEP_RESEARCH.md v1.1 · COMPANY-DEEP-RESEARCH_DESIGN-SPEC.md v1 · Fundamental Light-Filter (8-rule discipline) · LESSONS-LEARNED L-01..L-07

Builds on: 260425_DEEP-RESEARCH_india-GIS-frontrunners (thematic sister); cross-comparison companion to 260426_TANLA_DEEP-RESEARCH

Theme: B&W Canvas · matched to TANLA + DC-5LC + GIS-frontrunners briefs

Plain-English Glossary

Geospatial briefs accumulate jargon -- regulators, sensor types, programs, automotive-mapping conventions. This page expands every abbreviation and technical term used in the document so the reader can follow the argument without specialist context. Terms grouped by category. Everything else is written in plain English on top of these definitions.

Geospatial & Mapping Domain

GIS	Geographic Information System. Software + data + analytics for anything spatial -- maps, satellite imagery, location intelligence, terrain, infrastructure layouts.
HD-ADAS maps	High-Definition Advanced-Driver-Assistance-System maps. Centimetre-grade road geometry, lane lines, sign positions. The data layer that makes adaptive cruise, lane-keep, automated braking work in production vehicles.
ADAS	Advanced Driver-Assistance Systems. The auto-industry term for sensor + software stacks providing adaptive cruise, lane-keep, automated braking and similar safety features. Demands HD-quality maps.
SDV	Software-Defined Vehicle. The next-generation auto-OEM platform architecture where features are delivered through software rather than embedded hardware. Tata Motors' new platform uses Genesys HD-ADAS maps.
Native Navigation	On-board, vehicle-resident navigation -- as opposed to phone-mirrored. Standard-Definition map data sufficient. Genesys provides this for Tata Motors alongside HD-ADAS.
OEM	Original Equipment Manufacturer. In auto context = the carmaker (Tata Motors, Maruti, Mahindra, Hyundai). The buyers of embedded mapping data.
Per-vehicle licensing	Royalty pricing model where the data-supplier earns a fee per vehicle sold by the OEM. Genesys Tata Motors contract uses this structure.
EO	Earth Observation. Satellite imagery and measurements. Distinct from Genesys's ground/aerial mapping focus -- EO is a different layer of the GIS value chain.

Regulators, Programs & Policy Tailwinds

NGP-2022	National Geospatial Policy 2022. Liberalised private-sector participation in geospatial data and restricted full-resolution Indian-territory map data to Indian-controlled entities. The structural moat behind Genesys and MapMyIndia.
SoI	Survey of India. The official national mapping agency. Source of master geospatial data and contract-issuer for the National Geo-Spatial Platform.
PIB	Press Information Bureau. The Government of India's official communications channel for policy releases.
PM Gati Shakti	National master-plan for multi-modal infrastructure connectivity, launched 2021. Pulls GIS-grade integration data across 16 ministries.
BharatNet	National rural broadband project. Pulls fibre + GIS + tower mapping at scale.
Smart Cities Mission	Programme to develop 100 cities with city-data + IoT integration. Pulls GIS at municipal scale.
Labour Codes (2020-)	Four central labour codes consolidating earlier Indian labour law. Implementation creates one-time provisions for gratuity / leave-encashment / employee-benefits, hitting reported earnings in the implementation quarter (Genesys Q3 FY26 took a Rs.5.1 crore exceptional charge for this).
QIP	Qualified Institutional Placement. SEBI-regulated equity raise from institutional investors only -- faster than rights / FPO. Genesys raised funds via QIP; deployment timeline recently extended to 31 March 2027.

Companies, Tickers & Markets

NSE / BSE	National Stock Exchange / Bombay Stock Exchange. India's two main equity exchanges. Genesys is listed on both.
LTP	Last Traded Price. As of 25-April-2026 close: Rs.261.74.
DMA	Daily Moving Average. Genesys DMA50 ~Rs.275, DMA200 ~Rs.444 as of 25-April-2026 -- price below both.
OPM	Operating Profit Margin. Genesys's annual OPM is high (39% FY26) but recent quarterly OPM compressed sharply (50%+ to 20.8%).
PE	Price-to-Earnings. Genesys trailing PE ~27.
EBITDA	Earnings Before Interest, Tax, Depreciation, Amortisation.
D/E	Debt-to-Equity. Genesys D/E ~0.22 -- low gearing but rising on borrowings.
ROCE / ROE / ROIC	Return on Capital Employed / Return on Equity / Return on Invested Capital. Genesys ROCE 15%, ROE 10.8%.
Promoter holding	Indian-securities term for founding-family / controlling group. Genesys promoter holding 31.52% -- declined ~8 percentage points over 3 years.
ICR	Interest Coverage Ratio. Operating profit divided by interest expense.
Q3 FY26 / Q4 FY26	Indian fiscal-year quarters. Q3 FY26 = Oct-Dec 2025. Q4 FY26 = Jan-Mar 2026. Genesys Q3 FY26 was the recent weak print; Q4 FY26 announcement pending.

Peer & Cluster Universe

MAPMYINDIA	C.E. Info Systems Ltd (NSE: MAPMYINDIA). The dominant Indian mapping incumbent (~80% auto-OEM share). Already in operator's L5 watchlist; the structural Layer-A peer that Genesys is the smaller, faster-growing alternative to.
Pixxel / Dhruva / SatSure / PierSight	Pre-IPO consortium that won the IN-SPACe national EO contract (January 2026). Different layer of the GIS value chain (satellite Earth Observation, not ground/HD mapping). Not direct Genesys peers; covered in 260425_DEEP-RESEARCH_india-GIS-frontrunners.
IDEAFORGE	NSE: IDEAFORGE. India UAV market leader. Different layer (drones / aerial imagery).
HERE Technologies / TomTom	Global mapping incumbents (HERE owned by automotive consortium; TomTom Dutch-listed). NGP-2022 restricts them from full-resolution Indian map data, creating Genesys's regulatory moat in domestic ADAS.

Fundamental Light-Filter (8-rule discipline)

Fundamental Light-Filter	An 8-rule discipline used as a soft sanity-check on listed-equity candidates. Eight binary checks: promoter holding, price-to-earnings, debt-to-equity, return on capital metrics, operating profit margin, three-year sales growth, interest coverage, market-cap to sales ratio.
Promoter Holding ≥ 50%	Founding-group ownership of at least half. Genesys at 31.52% (and trending down 8 percentage points over 3 years) -- FAILS clearly.
P/E ≤ 20	Price-to-earnings ratio not above 20. Genesys at 27.1 -- FAILS (in 25-40 caution band).
D/E ≤ 0.5	Debt-to-equity not above 0.5. Genesys at 0.22 -- PASSES.
ROCE / ROE / ROIC ≥ 20%	Each at or above 20%. Genesys ROCE 15%, ROE 10.8% -- FAILS.
OPM ≥ 20%	Operating Profit Margin at or above 20%. Genesys annual OPM 39% PASSES; latest-quarter OPM 20.8% (sharply compressed) -- borderline pass.
Sales growth (3-year CAGR) ≥ 20%	Three-year revenue CAGR. Genesys ~38% (FY23 Rs.120 cr to FY26 Rs.318 cr) -- PASSES strongly.
ICR ≥ 5	Interest Coverage Ratio. Genesys ~11x -- PASSES.
MCap / Sales ≤ 2	Market-cap to annual sales ratio not above 2. Genesys ~3.7x -- FAILS clearly.

Executive Summary

Genesys International is India's number-two mapping-data operator after MapMyIndia, structurally protected by the National Geospatial Policy 2022 (which restricts foreign holding of full-resolution Indian map data) and anchored on a multi-year Tata Motors HD-ADAS contract on the carmaker's Software-Defined Vehicle platform. The company is the cleanest peer-replication play to MapMyIndia in the Indian listed mapping space. The stock has fallen ~65% from its 52-week high (Rs.743 to current Rs.262) and trades near its 52-week low Rs.207, recovering ~26% from the bottom. Q3 FY26 was a difficult quarter -- exceptional Rs.5.1 crore charge for Labour Codes implementation, operating-margin compression from 50%+ to 20.8%, and net-profit drop to Rs.1 crore from Rs.12 crore the prior quarter. Q4 FY26 results pending.

CORE VERDICT

Genesys passes 4 of 8 fundamental-discipline rules; the four failures cluster around governance and quality, not cyclicality. Tata Motors anchor is real and material. But macro context (India VIX 19.7, Brent $99, USDINR Rs.94) is in the watch zone, and the discipline-screen weakness is structural, not transient.

Eight rule check: Promoter Holding 31.52% (FAIL -- declining 8 percentage points over 3 years; flag). Price-to-Earnings 27.1 (FAIL -- in caution band). Debt-to-Equity 0.22 (PASS). ROCE 15% / ROE 10.8% (FAIL -- below 20% threshold). Operating Profit Margin: annual 39% PASS, latest-quarter 20.8% borderline (margin volatility). Three-year sales CAGR ~38% (PASS strongly). Interest Coverage Ratio ~11x (PASS). Market-Cap to Sales ~3.7x (FAIL -- well above 2x threshold). The four failures point at structural quality issues (sub-50% promoter holding with dilution trend, modest returns on capital, premium valuation versus revenue base) rather than at temporary cycle pressure.

Three operator-stated concerns, addressed head-on

- 'Already-studied sector -- what does Genesys add to the GIS picture?' -- The 260425 GIS-frontrunners thematic brief flagged Genesys explicitly as the 'cleanest mapping-data peer' to MapMyIndia at Layer A and recommended 'wait for clean-quarter re-acceleration'. That call has aged correctly: Q3 FY26 was NOT a clean re-acceleration print -- it had revenue stagnation plus exceptional labour-code charges plus margin compression. The peer-replication thesis remains intact structurally; the entry timing is still pending the next clean quarter.
- 'How does Genesys compare to TANLA on potential?' -- TANLA passed 5 of 8 discipline rules; Genesys passes 4 of 8. Both have promoter-holding sub-50% (TANLA 46.17% stable; Genesys 31.52% declining). TANLA's failures cluster around CPaaS-structural margin reality; Genesys's failures cluster around ROCE/ROE/MCap-to-sales -- which read more like governance-and-quality issues than cyclical issues. TANLA had a clean Q4 FY26 print; Genesys had a bad Q3 FY26 print. On chart: TANLA shows V-bottom recovery with clean accumulation; Genesys is still in the bleed phase, only ~26% off the bottom. The honest read: TANLA is the cleaner near-term setup; Genesys is the harder optionality bet that needs more patient timing.
- 'What about the Tata Motors anchor?' -- The 6-year HD-ADAS contract on Tata Motors' Software-Defined Vehicle platform is genuinely material -- it gives Genesys per-vehicle royalty exposure to one of India's top-3 carmakers across a multi-year window. But: the revenue is back-end-loaded (royalties scale with vehicle sales over years), the contract does NOT immediately fix the Q3 FY26 quality problems, and Tata Motors' own SDV ramp pace is the second-order variable that determines Genesys's cash flow from this anchor. Treat as embedded multi-year option, not a current-quarter catalyst.

Section 1 / Company Overview

Genesys International Corporation Ltd is a Mumbai-headquartered geospatial-data and HD-mapping company. Listed on NSE and BSE since the early 2000s. Founder and current promoter group: Sajid Malik. Core business: building, licensing and maintaining proprietary high-resolution map data of India for automotive OEMs, government programs, telecom infrastructure planners, smart-city implementers, and enterprise location-intelligence customers. The company operates one of India's only large-scale 3D city-modelling and HD-ADAS map data assets. FY26 consolidated revenue Rs.318 crore; market cap Rs.~1,170 crore (small-cap).

1.1 Business segments

Segment	What it does	FY26 revenue mix
Auto-OEM Mapping	Native Navigation + HD-ADAS map data; per-vehicle royalty model. Tata Motors 6-year contract is the anchor; other OEMs in pipeline.	Rising share, FY26 onward
Government & Defence GIS	Smart Cities, BharatNet, PM Gati Shakti, Survey of India work; 3D city models; defence-survey services.	Material; lumpy
Enterprise Location Intelligence	GIS analytics, 3D urban modelling, infrastructure-planning datasets sold to telecom, utilities, retail, real estate.	Steady; smaller
Map-Refresh / Subscription	Recurring data-refresh services to existing map licensees.	Recurring annuity-like

1.2 Equity structure & promoter trend

Equity capital: Rs.21 crore (face value Rs.5). Promoter holding: 31.52% and declining (was 39.7% three years ago -- a fall of approximately 8 percentage points). This is below the 50% Fundamental Light-Filter threshold and the negative trend is itself a flag for governance review (see Section 2). FII holding ~5%. DII holding ~2%. Public holding ~61%. QIP funds raised earlier; deployment timeline recently extended to 31 March 2027 (per Q4 FY26 SEBI compliance certificate filed by company).

1.3 Recent corporate actions & catalysts

- Tata Motors 6-year HD-ADAS contract: awarded for Native Navigation + HD-ADAS map supply on Tata Motors' Software-Defined Vehicle platform across India. Per-vehicle licensing model. Multi-year revenue visibility.
- India's first HD-ADAS map launch (1 lakh km coverage): centimetre-grade map data covering national highways and major corridors. Stock rallied 13% on the announcement. Establishes Genesys as the only Indian player at scale in HD-ADAS map data.
- Q3 FY26 results (declared earlier in 2026): revenue stagnation (Rs.76 crore vs Rs.71 crore prior quarter), Operating Profit Margin compressed to 20.8% (from 39-50% range), exceptional charge of Rs.5.1 crore for Labour Codes implementation, net profit collapsed to Rs.1 crore.
- QIP-fund-deployment extension: board approved extending the deployment of Rs.75.29 crore QIP proceeds to 31 March 2027.
- Authorised share capital increase to Rs.45 crore: board-approved postal ballot. Creates headroom for further equity issuance -- could be a future-dilution flag if exercised.
- Q4 FY26 results pending: the next single most important data point. Will confirm whether Q3 was a one-off (labour-code charge non-recurring) or whether margin compression was structural.

ANCHOR FACT

The Tata Motors contract is the load-bearing anchor of the forward thesis.

It is a multi-year per-vehicle royalty contract on India's third-largest passenger-vehicle OEM, on the OEM's next-generation Software-Defined Vehicle platform. The economics compound with each Tata Motors vehicle sold over six years. But the revenue is back-end loaded; current-quarter financials don't reflect it yet; and Tata Motors' own SDV-platform rollout pace is the second-order variable. Treat as embedded multi-year option, not a current-quarter cash flow.

Section 2 / Management & Governance

2.1 Founder & promoter group

Founder and promoter: Sajid Malik. Built Genesys as one of India's earliest specialised GIS-data houses, well before the 2022 NGP unlock. The company spent ~2018-2022 in transition (multiple loss-making years, see Section 5 financials), then executed a successful reset around the Karix-style mapping/data pivot, reaching profitability in FY24 and delivering the FY25-FY26 revenue jump. The Tata Motors contract win is the public validation of the strategy under his leadership.

2.2 Board & governance footprint

- Independent directors: present on the board per SEBI LODR norms (verify exact split in latest annual report; not separately disclosed in this brief's primary scrape).
- Audit committee: chaired by an independent director per disclosures.
- Statutory auditor: continuous appointment (no auditor change events flagged in last 3 years per SEBI orders database).
- Postal ballot active: board approved authorised-share-capital increase to Rs.45 crore -- creates dilution headroom; operator should monitor whether this is exercised.

2.3 Governance flags -- adversarial scan

Check	Status	Note
Promoter holding trend (3y)	DECLINING	39.7% -> 31.52% over recent three-year window (-8.19 percentage points). Material trend; needs explanation in next AGM.
SEBI / NSE adverse actions (5y)	NONE FOUND	No prosecution, settlement, or penalty visible in SEBI orders database.
Promoter pledge	NIL	Promoter shares unencumbered per latest shareholding pattern filing.
Auditor changes (5y)	NONE	Continuous statutory auditor.
Insider sales (24mo)	SOME	Promoter holding declined; portion likely via market sales rather than dilution alone. Verify exact split via shareholding-change disclosures.
Authorised share capital	EXPANDING	Board-approved increase to Rs.45 crore via postal ballot. Creates fresh-issuance headroom.
Off-balance-sheet items	NONE FLAGGED	No contingent-liability spikes; no special-purpose-vehicle financing flagged.
Cash flow vs reported PAT (5y)	VARIABLE	Earlier loss years (FY20-FY22) had erratic cash conversion; FY24-FY26 normalised.

GOVERNANCE GATE

PASS with two ambers -- promoter holding trend and authorised-share-capital expansion both warrant monitoring.

No kill-flag triggered: no SEBI actions, no auditor change, no off-balance-sheet financing, no promoter pledge. But two ambers stand out and the operator should weight them: (1) promoter holding fell ~8 percentage points over three years and now sits at 31.52% (well below the 50% Fundamental Light-Filter threshold), and (2) the board has authorised increasing the share-capital ceiling, creating room for future equity issuance. Neither is currently a kill-flag, but both belong on the watch register.

Section 3 / The Tata Motors HD-ADAS Anchor -- Real Moat or Marketing?

This is the load-bearing forward question for Genesys. The legacy GIS / government-survey business is real but lumpy and modest in growth. The investment narrative depends on whether the auto-OEM HD-ADAS data layer becomes a material recurring revenue line over the next 3-5 years, anchored by the Tata Motors contract and extended to additional carmakers.

3.1 What HD-ADAS map data is, and why it's a different business

Standard navigation maps tell a vehicle which roads connect to which. HD-ADAS maps tell the vehicle's autonomous-systems software exactly where the lane lines are to centimetre precision, where the road edges are, where stop signs and speed-limit signs sit, and what the road geometry (curves, slopes, intersections) looks like in three dimensions. This data is what makes adaptive cruise stay in lane on a curve, what enables automated lane-change, and what allows hands-off driving on supported highways. Per-vehicle licensing fees from this data are 5-20x higher than from standard navigation maps, and the asset depreciates slowly -- once you've mapped a corridor at HD precision, refresh costs are far lower than the original capture cost.

3.2 The Tata Motors contract -- specifics

Element	Detail
Counterparty	Tata Motors Passenger Vehicles Limited
Scope	Native Navigation + HD-ADAS maps for Tata Motors' Software-Defined Vehicle platform
Coverage	Pan-India
Term	6 years
Compensation model	Per-vehicle licensee fees (royalty per Tata Motors vehicle sold on the SDV platform)
Revenue recognition	Back-end-loaded as Tata Motors SDV-vehicle volumes ramp

The 1 lakh km HD coverage launch -- Genesys announced and demonstrated India's first scaled HD-ADAS map data covering 1 lakh km of national highways and major corridors. Stock rallied ~13% on the announcement. This is the proof-of-execution that backs the Tata Motors contract: Genesys has the capture-and-process capability at the scale required.

3.3 Honest scepticism -- five open questions

- How fast does the Tata SDV-platform vehicle volume ramp? The contract is per-vehicle royalty. If Tata sells 50,000 SDV-platform vehicles per year, the Genesys revenue is one number. If Tata sells 500,000, the number is materially different. Tata Motors guides FY27-FY29 SDV volumes; Genesys revenue tracks that.
- Are there other-OEM contracts in pipeline? If only Tata Motors signs, the revenue concentration is severe. Conversations referenced; no second-OEM signed contract publicly disclosed yet.
- What is the per-vehicle royalty rate? Not publicly disclosed. The contract economics depend critically on this number; without it the modelling is approximation.
- Will MapMyIndia compete head-on for the same OEM contracts? MapMyIndia has 80% Indian-OEM share on standard navigation maps. They are the natural HD-ADAS competitor. If they price aggressively to defend share, Genesys's economics get capped.

- What is the data-refresh cadence cost? HD-ADAS maps need updating as roads change. Refresh capex is opex over time. Margin economics depend on refresh frequency that's still being established.

TATA ANCHOR VERDICT

Real multi-year option, NOT current-quarter catalyst.

The Tata contract is a genuine commercial validation of Genesys's HD-ADAS capability. The 1 lakh km coverage launch is real proof of execution. But the revenue is back-end-loaded to Tata's vehicle-volume ramp, the per-vehicle royalty rate is undisclosed, and there is no second-OEM contract publicly signed yet. Treat as embedded 3-5 year option upside on the core mapping business; do NOT treat as a Q4 FY26 / Q1 FY27 catalyst.

Section 4 / Core Mapping-Data Risk -- The Q3 FY26 Wake-Up Call

Q3 FY26 was the moment that called the structural-quality thesis into question. The print combined revenue stagnation, sharp margin compression, an exceptional Labour-Code charge, and a near-zero net profit. The question is whether Q3 was a one-off implementation quarter or whether it exposed a structural margin reality.

4.1 The Q3 FY26 print -- the data

Quarter (chronological)	Sales Rs.cr	Op Profit Rs.cr	OPM %	Net Profit Rs.cr	EPS Rs.
Q3 FY24	59.34	30.78	51.87	15.73	4.19
Q4 FY24	71.17	36.25	50.93	14.79	3.76
Q1 FY25	55.76	20.41	36.60	5.30	1.36
Q2 FY25	72.02	29.38	40.79	11.09	2.83
Q3 FY25	89.09	42.57	47.78	20.71	5.20
Q4 FY25	94.16	49.77	52.86	19.00	4.76
Q1 FY26	70.87	29.50	41.63	6.98	1.71
Q2 FY26	76.95	29.99	38.97	12.05	2.88
Q3 FY26	75.78	15.75	20.78	1.05	0.26

Read: the trend through Q3 FY25 - Q4 FY25 was strong (revenue stepping up, OPM in 47-53% range, NP Rs.19-21 cr). Then Q1 FY26 dropped on every metric. Q2 FY26 partially recovered. Q3 FY26 collapsed on margin (50%+ to 20.78%) and net profit (Rs.12 cr to Rs.1 cr). Of the Q3 FY26 delta versus Q2 FY26, approximately Rs.5.1 crore is attributable to the Labour-Codes implementation exceptional charge -- which IS a one-off. But adjusted-for-charge OPM still implies meaningful operational compression. Q4 FY26 will define whether this is structural or transient.

4.2 What's driving the margin volatility

- Mix shift toward lower-margin work: Government / smart-city contracts have lumpier revenue and lower steady-state margins than auto-OEM royalty work. Q3 FY26 mix may have leaned this way.
- Labour-Code one-off: Rs.5.1 crore exceptional charge for new central labour-codes implementation. Genuinely one-off; does not recur in Q4 FY26.
- HD-ADAS capture investment: mapping the 1 lakh km HD coverage requires sustained capture-and-process opex that hits the P&L before per-vehicle royalty revenue materialises. This is structural for the next 12-18 months.
- Rising interest cost: borrowings climbed Rs.39 cr -> Rs.60 cr -> Rs.122 cr -> Rs.147 cr over recent years; quarterly interest expense ~Rs.3 crore. Below ICR threshold concerns but rising trajectory.
- Currency & international exposure: minimal. Mostly INR-domestic.

MAPPING-DATA RISK VERDICT

Q3 FY26 was bad. Q4 FY26 result is the trigger for any cleaner read.

The decline pattern is real. The Labour-Code charge is one-off (Rs.5.1 cr will not recur). But adjusted-for-charge margins still imply operational compression that needs to be explained on the call. Until Q4 FY26 prints, Genesys is in a 'wait for clean quarter' posture exactly as the 260425 GIS-frontrunners brief flagged. Buying ahead of Q4 FY26 is buying into a binary catalyst on a chart that has not yet stopped bleeding.

Section 5 / Valuation Triangulation vs Peers

Genesys at Rs.262 close (market cap ~Rs.1,170 crore) trades on a multi-method valuation set that looks rich versus the FY26 revenue base (Market-Cap-to-Sales 3.7x, well above the Fundamental Light-Filter 2x threshold) but reasonable if forward Tata Motors HD-ADAS royalty revenue materialises. The question reduces to: how much credit do you give the Tata anchor today.

Company	Geo / Layer	Mkt Cap Rs.cr	EV/Sales	EV/EBITDA	PE	Net D/E
GENESYS	India / GIS-Map L-A	1,170	3.7x	~10x	27.1x	0.22
MAPMYINDIA (CE Info)	India / GIS-Map L-A	~14,500	~13x	~30x	~50x	negative (net cash)
IDEAFORGE	India / Drones (different layer)	~1,800	~6x	n/m (low NP)	n/m	low
HERE Technologies	Europe / global maps (private)	n/m	n/m	n/m	n/m	n/m
TomTom	Netherlands / global maps	EUR ~600m	1.4x	8x	neg	negative

Source: company filings, screener.in, Bloomberg / Refinitiv consensus where available (April 2026).

5.1 What current valuation implies

MapMyIndia trades at ~13x EV/Sales, ~30x EV/EBITDA, ~50x PE -- a deep premium on the structural-moat case. Genesys at 3.7x EV/Sales / 27x PE is one-quarter of MapMyIndia's revenue multiple but with materially worse fundamental-discipline scores (4/8 vs MapMyIndia which would likely score higher). The valuation gap is partly justified by Genesys's much smaller scale and execution risk; partly opportunity if the HD-ADAS thesis plays.

5.2 Bull-case fair value (Tata anchor delivers + new OEM signed)

If FY28-FY29 Tata Motors SDV-platform vehicles ramp to 200,000-300,000/yr and Genesys earns approximately Rs.500-1,500/vehicle royalty (range; rate undisclosed), HD-ADAS revenue could add Rs.100-450 crore annual to the base -- material on a Rs.318 crore current sales base. Add a second OEM contract and the picture compounds. Fair value in this scenario at 4-5x EV/Sales on FY28 revenue Rs.500-700 crore implies Rs.450-600/share -- 70-130% upside from current.

5.3 Bear-case fair value (Tata ramp slips, no second OEM)

If Tata SDV vehicle volumes stay below 100,000/yr and no second OEM signs by FY28, HD-ADAS revenue tops out at Rs.50-80 crore. Genesys reverts to the legacy GIS / government / smart-city revenue base with mid-teens OPM. Fair value at 1.5-2x EV/Sales on Rs.350-400 crore revenue implies Rs.150-180/share -- 30-43% downside from current.

VALUATION VERDICT

Asymmetric on the optionality, but the base case is closer to the bear case absent Tata-ramp evidence.

Valuation only works if you give meaningful credit to the Tata Motors HD-ADAS royalty stream materialising at scale. Without that, the discount-to-MapMyIndia multiple is earned, not opportunity. The asymmetry is real but the bear case is closer to current price than the bull case is. Operator timing should anchor on Tata SDV vehicle-volume trajectory data, not on Genesys headline news.

Section 6 / Catalysts, Risks & Falsification Tests

6.1 Catalyst calendar (next 12 months)

Date	Event	What it tells us
May 2026 (est.)	Q4 FY26 results announcement	Highest priority near-term: does Q3 FY26 margin compression reverse? Is the Labour-Code charge truly one-off? FY27 revenue / margin commentary.
May-Jul 2026	Annual report + AGM disclosures	Detailed segment reporting, ESOP grants, related-party schedule, promoter-holding-decline explanation.
Q1 FY27 (Aug 2026)	Q1 results	Confirm or disprove the Q4 trend. Watch Tata Motors-attributable revenue line if disclosed.
Sep-Dec 2026	Tata Motors SDV vehicle-volume disclosures	Tata's own SDV-platform vehicle ramp directly drives Genesys royalty.
FY27	Second-OEM contract (or its absence)	If a second carmaker signs an HD-ADAS deal with Genesys, the concentration risk eases. If not, a flag.
FY27	Authorised-share-capital exercise (or shelf)	Watch whether the Rs.45 crore authorised cap is exercised; further dilution likely.

6.2 Risk register (ranked by probability x severity)

#	Risk	Prob.	Severity	Hedge
1	Q4 FY26 print does not show margin recovery	Med-High	High	Wait for the print before deploying
2	Tata Motors SDV ramp slower than implicit expectation	Med	High	Track Tata Motors SDV vehicle-volume disclosures quarterly
3	MapMyIndia competes aggressively for HD-ADAS OEM contracts	Med	Med	Watch for second-OEM RFP outcomes; trim if MMI wins them
4	Further promoter dilution / authorised-share-cap exercise	Med	Med	Daily insider-disclosure feed; trim on first material event
5	Borrowings continue to rise; ICR compresses	Low-Med	Med	Quarterly balance-sheet read; exit if ICR drops below 5
6	Government / SoI contract revenue lumpy	Med	Low	Diversification across segments mitigates
7	FII / smallcap-tech sentiment cracks	Med	Med	Index-hedge or sit out
8	Promoter holding event (further fall, pledge etc.)	Low	Critical	Daily SEBI feed; abort on any signal
9	Auditor change or governance event	Low	Critical	Daily SEBI feed; abort on any signal
10	Smallcap liquidity (Rs.1,170 cr mcap = thin float)	Med	Low-Med	Smaller position size; staggered exits

6.3 Falsification tests (per research-discipline.md Rule 7)

#	Claim	Failure trigger
1	Tata Motors HD-ADAS contract is the load-bearing anchor	If FY28 cumulative Tata-attributable revenue is below Rs.50 crore, the anchor is too small to justify the multiple expansion in the bull case.
2	Q3 FY26 margin compression was largely Labour-Code one-off	If Q4 FY26 OPM stays below 30% (still below the 39% FY26 annual), the Labour-Code excuse explains only part of the compression -- the rest is structural.
3	Genesys is the cleanest mapping-data peer to MapMyIndia	If a new HD-ADAS-grade Indian map data competitor emerges (private or listed) within 12 months, Genesys's NGP-2022 + scale moat narrows.
4	Promoter-holding decline trend is contained at 31.52%	If next quarterly shareholding pattern shows promoter holding below 28%, the dilution trajectory is accelerating, not stabilising.
5	Fundamental-discipline screen 4/8 PASS holds	If P/E expands above 35 with no margin justification, OR ROCE falls below 12%, OR a new FAIL is added, the screen falls to 3/8 or below -- an investability flag.

Section 7 / Fundamental-Discipline Stamp + Final Verdict

7.1 Fundamental-discipline screen -- explicit stamp

Eight binary rules, applied to Genesys's latest reported numbers. Each rule passes or fails. No partial credit. The screen is designed to filter companies out, not to recommend trades; passing it means the company clears a basic quality bar, not that the trade is right.

#	Rule	Genesys reading	Verdict
1	Promoter Holding ≥ 50%	31.52% (declining ~8pp over 3y)	FAIL
2	Price-to-Earnings ≤ 20	27.1 (caution band)	FAIL
3	Debt-to-Equity ≤ 0.5	0.22	PASS
4	ROCE / ROE / ROIC ≥ 20%	ROCE 15%, ROE 10.8%	FAIL
5	Operating Profit Margin ≥ 20%	Annual 39% PASS; latest Q 20.78% borderline	PASS
6	Sales growth (3-year CAGR) ≥ 20%	~38% (Rs.120 cr -> Rs.318 cr in 3y)	PASS
7	Interest Coverage Ratio ≥ 5	~11x	PASS
8	Market-cap / Sales ≤ 2	~3.7x (well above threshold)	FAIL

FUNDAMENTAL-DISCIPLINE AGGREGATE

4 of 8 PASS -- split decision. The four failures are quality / governance issues, not cyclical noise.

The four failures cluster around structural quality concerns: sub-50% promoter holding with a declining trend (FAIL #1), elevated P/E in caution band (FAIL #2), modest returns on capital well below the 20% bar (FAIL #4), and a market-cap-to-sales ratio nearly twice the 2x threshold (FAIL #8). The four passes carry the growth-and-balance-sheet story: low debt, strong sales CAGR, healthy interest coverage, and adequate (annual) operating margin. For comparison, the TANLA brief (260426) scored 5 of 8; Genesys is one rule weaker -- meaningfully but not fatally.

7.2 Final verdict on the deep-research scope

Would-buy reasons: (1) NGP-2022 regulatory moat is real and protects the core mapping-data business from foreign competition; (2) Tata Motors 6-year HD-ADAS contract is a multi-year embedded option on per-vehicle royalty revenue; (3) 1 lakh km HD-ADAS coverage launch is real proof of execution; (4) sales CAGR of ~38% over three years demonstrates the underlying growth trajectory; (5) chart at -65% from peak with V-bottom potential at Rs.207-210 zone gives mean-reversion optionality.

Would-not-buy reasons: (1) Fundamental-discipline screen fails on 4 of 8 rules, with the failures clustering around governance and quality (promoter dilution, modest ROCE, premium MCap/Sales) rather than cyclical noise; (2) Q3 FY26 margin compression was severe and Q4 FY26 hasn't been printed yet -- the discipline says wait; (3) Tata Motors anchor revenue is back-end-loaded and depends on Tata's own SDV-platform vehicle ramp; (4) second-OEM contract not yet publicly signed, so concentration risk is high; (5) authorised-share-cap expansion creates fresh-issuance headroom -- future dilution flag.

Depends-on reasons: The Q4 FY26 results announcement (expected May 2026) is the dominant near-term decision driver. Margin recovery from the 20.78% Q3 print would validate the Labour-Code-was-one-off thesis; continued compression would say structural. Beyond that, the regime gating: current macro reads India VIX 19.7 (above the 18 watch threshold), Brent crude $99 (already in watch), USDINR Rs.94 (rupee weak), Nifty intraday -1%. For a single-name capital test, the cleaner discipline in this regime is to abort and sit out rather than rotate to either Genesys or any other name. Test integrity matters; defining the trade through a difficult regime is the wrong end of the variance distribution.

DEEP-RESEARCH NET STAMP

Genesys is a real company with a real moat and a difficult quarter. The 4-of-8 fundamental-discipline pass and the unprinted Q4 FY26 say wait, do not deploy.

This brief does NOT recommend deployment. Genesys clears the qualitative bar (regulatory moat is real, Tata Motors anchor is real, Q3 FY26 charge is partially one-off, sales CAGR is strong) but the discipline screen says four-of-eight rules fail and the chart is in the bleed phase. The cleaner discipline says wait for Q4 FY26 confirmation and a regime that supports any single-name test.
