

INDIA GIS BOOM

Front-Runners by Value-Chain Layer

A Deep-Research Thematic Brief

Mapping the listed pure-plays, the dilution traps, and the pre-IPO consortium that just won the national Earth-Observation contract.

PREPARED FOR

Sparcho

WORKSTREAM

Deep-Research

DATE

25 April 2026

Mode: STUDY — research-only, not a trade recommendation.

Anchor protocols: PROCESSES.md §5.22 · research-discipline.md v1 · fundamental analysis filter (light filter applied)

Builds on: 260423_DEEP-RESEARCH_mapmyindia-governance-GIS-AI

Theme: B&W Canvas · per CLAUDE.md §11.5 bento theme stack

Plain-English Glossary

Geospatial briefs accumulate jargon -- regulators, sensor types, programs. This page expands every abbreviation and technical term used in the document so the reader can follow the argument without specialist context. Terms are grouped by category. The page is dense by design; everything else is written in plain English on top of these definitions.

Geospatial Domain Terms

GIS	Geographic Information System. Software + data + analytics for anything spatial -- maps, satellite imagery, location intelligence, terrain, infrastructure layouts.
EO	Earth Observation. Imagery and measurements collected from satellites or aerial platforms. Includes optical, hyperspectral, SAR, multispectral data.
Hyperspectral	Imaging across hundreds of narrow wavelength bands (vs. RGB / 3-band optical). Lets you identify materials -- minerals, crops, pollutants -- by their spectral signature. Pixxel's speciality.
SAR	Synthetic Aperture Radar. Active-sensor satellite imagery using microwaves. Works through clouds and at night. Critical for monitoring (defence, maritime, disaster). PierSight's speciality.
Multispectral	Imaging across a handful of broad wavelength bands (e.g. visible + near-infrared + short-wave infrared). Standard for vegetation / land-use monitoring.
Optical (satellite)	Visible-light satellite imagery, like Google-Earth-grade pictures. Standard reference layer.
UAV	Unmanned Aerial Vehicle. Drone. Class includes tactical (military), industrial (surveying / inspection), and consumer.
ADAS	Advanced Driver-Assistance Systems. Auto-industry term for sensor + software stacks providing adaptive cruise, lane-keep, automated braking, etc. Demands HD-quality maps.
HD-ADAS / HD maps	High-definition mapping data tuned to ADAS requirements -- centimetre-grade road geometry, lane-line locations, sign positions. Genesys International's recent India launch covers 1 lakh km of national corridors.
ISR	Intelligence, Surveillance, Reconnaissance. Defence-domain category for imagery and signal-collection systems.
EW	Electronic Warfare. Defence-domain sub-category covering jamming, spoofing, RF detection.
CVTMS	Commercial Vehicle Tracking and Monitoring System. Telematics for fleet operators. IOCL's Rs. 110 cr CVTMS contract with MAPMYINDIA covers ~23,000 LPG trucks.

Regulators, Programs & Policy

IN-SPACe	Indian National Space Promotion and Authorisation Centre. The autonomous body created to permit and promote private-sector space activities. Issued the Rs. 1,200 cr private national EO contract to the Pixxel-led consortium in January 2026.
NGP-2022	National Geospatial Policy 2022. Liberalised private-sector participation in geospatial data and restricted full-resolution Indian-territory map data to Indian-controlled entities. The structural moat behind MAPMYINDIA / Genesys.
SoI	Survey of India. The official national mapping agency. Awarded MAPMYINDIA the National Geo-Spatial Platform contract -- the first national platform for geospatial-data cataloging + role-based access.
PIB	Press Information Bureau. The Government of India's official communications channel for policy releases. Used here as a primary-source citation for NGP / Budget claims.
PM Gati Shakti	National master-plan for multi-modal infrastructure connectivity, launched 2021. Pulls GIS-grade integration data across 16 ministries.
BharatNet	National rural broadband project. Pulls fibre + GIS + tower mapping at scale.
Smart Cities Mission	Programme to develop 100 cities with city-data + IoT integration. Pulls GIS at municipal scale.
DGCA	Directorate General of Civil Aviation. The drone-licensing and operations regulator in India.
PPP	Public-Private Partnership. The contracting structure of the IN-SPACe national EO award.
MeitY	Ministry of Electronics and Information Technology. India's central tech-policy department; owns the data-centre tax-holiday eligibility scheme.

Plain-English Glossary (continued)

Companies, Tickers & Markets

NSE / BSE	National Stock Exchange / Bombay Stock Exchange. India's two main equity exchanges. "NSE/BSE" means the stock is listed on both.
LTP	Last Traded Price. The most recent quoted market price for a stock.
DMA	Daily Moving Average. "50-DMA" = 50-day moving average. A common technical reference.
OPM	Operating Profit Margin. Operating profit / revenue. Used as a quality-of-earnings indicator.
PE	Price / Earnings ratio. Market cap divided by net profit. Higher PE = market is paying more for each rupee of profit.
EBITDA	Earnings Before Interest, Tax, Depreciation, and Amortisation. A cash-profit proxy.
RPT	Related-Party Transaction. Money flow between the listed company and entities controlled by promoters / directors / their families. Subject to disclosure rules.
Promoter	Indian-securities term for the founding owner / controlling shareholder group. Disclosed on a per-stock basis.
Q3 FY26	Third quarter of fiscal year 2025-26 (Oct-Dec 2025). India's fiscal year runs April to March.
9MFY26	First nine months of fiscal year 2025-26 (Apr-Dec 2025).
OEM	Original Equipment Manufacturer. In auto context = the carmaker (Maruti, Tata Motors, Mahindra, Hyundai etc.) buying embedded maps from MAPMYINDIA.
CAGR	Compound Annual Growth Rate. Annualised growth rate over multiple years.
PSU / Maharatna	Public Sector Undertaking. Government-owned listed company. Maharatna = top tier (financial size + autonomy). BEL is a Maharatna PSU.
DRHP	Draft Red Herring Prospectus. The first formal IPO filing with SEBI. "No DRHP visible" means the company has not started a public listing process.
SEBI	Securities and Exchange Board of India. The market regulator.
SME-graduated	A company that listed first on the SME (small-and-medium-enterprise) board with lighter disclosure rules, then graduated to the main NSE/BSE board. Governance scrutiny is harder during the SME period.

TRADER Protocol Anchors

TRADER-60	The 60-name Indian-equity universe currently monitored by the TRADER system (canonical list in CLAUDE.md §16). "TRADER-60 L3" = name is in the universe and classified Layer 3 in the 5-Layer Cake.
GAP	Name not currently in TRADER-60. Tag in tables = absent from the watchlist.
IPO-WATCH	Maintained file ('/TRADER/03_SCREENERS/IPO-WATCH.md') of pre-IPO names actively monitored for filing / pricing / listing.
§5.20 / §5.22 / §5.24	PROCESSES.md sections. §5.20 = DEEP_RESEARCH_MINI_PROJECT (this brief's process spec). §5.22 = CRITICAL_ANALYSIS_INTAKE (input rigor). §5.24 = STRESS_TEST_GATE (output rigor for actionable decisions; not invoked here because brief is study-mode).
research-discipline.md	TRADER's standing 10-rule research-methodology standard: frame-check, 80/20 scope, first principles, source discipline, 3-alternative rebuild, current-behaviour map, falsification test, cheat-sheet output, skeptic pass, L1-L5 layering.
V-01 / V-02	Validation-log anchors. V-01: charts authoritative for price. V-02: zero numerical-error tolerance.
Fundamental analysis filter	A light filter applied to listed candidates: PE × OPM coherence, governance check, no-peak-price rule, mean-reversion bias, clean-quarter requirement. Kept light here because this is a study brief, not a trade recommendation.
Mechanism vs. analogy	Distinction codified in Paul-Graham research-discipline. "Mechanism" = a concrete revenue line linking the company to the theme. "Analogy" = thematic resemblance with no P&L; evidence. Owning a \$200B IT-services company for a \$50M GIS practice is the canonical analogy-not-mechanism failure mode.

Executive Summary

The Indian geospatial opportunity is structurally real and policy-anchored. The geospatial economy is projected at Rs. 63,100 crore by 2025 with ~14% CAGR onwards, the National Geospatial Policy 2022 has formally unlocked private participation, and IN-SPACe has just (January 2026) awarded a Rs. 1,200 crore private national Earth-Observation constellation to a consortium of pre-IPO companies. The thesis is not in question. What is in question is whether the listed surface of this theme is investable at scale today. The honest answer is: thinly.

CORE FINDING

Most of the cleanest mechanism plays are pre-IPO.

Most of the “famous-name” exposures (TCS, INFY, L&T, Delhivery) are dilution-grade and flunk the mechanism-not-analogy test. The two listed names that survive a fundamental light-filter are MAPMYINDIA and GENESYS at the data layer, with IDEAFORGE as the single listed UAV pure-play. Everything else either dilutes the thesis, fails the peak-price gate, or is more honestly held for the defense thesis.

Bottom-line picks per layer

- Mapping data: GENESYS INTERNATIONAL is the obvious peer-replication play (faster grower than MMI, smaller base) — but Q3 FY26 fired exceptional charges and a revenue decline; multi-quarter watch.
- Earth Observation: No clean listed pure-play exists today. IPO-WATCH high priority for Pixxel, Dhruva Space, SatSure. Listed BEL / Astra / MTAR are diluted.
- Drones & aerial imagery: IDEAFORGE is the only listed pure-play with a sector tailwind — chart healed favourably for mean-reversion, but profitability still emerging; watchlist not buy-now.
- Infrastructure cross-stack: HFCL and STLTECH (already in book) capture the fiber-backbone overlap with the data-centre thesis — additive, not a fresh entry.
- Logistics, insurance, climate, surveying, IT services: honest empty-or-diluted-set. Skip as a thesis driver.

How to read this document

Part I lays out the strategic context — market sizing, the NGP-2022 unlock, and the IN-SPACe anchor fact. Part II is the value-chain map: ten layers (A through J) walked end-to-end with named candidates, mechanism notes, and fundamental light-filter verdicts. Part III distils the cleanest entry points and audits the existing TRADER-60 universe for gaps. Part IV runs falsification tests and surfaces three common misconceptions a casual reader of the theme is likely to hold. The closing section covers source tiers, scope limits, and the IPO-WATCH additions.

Readers primarily interested in the picks may proceed directly to Part III.

Part I / The Strategic Context

1.1 Market sizing and the NGP-2022 unlock

The Indian geospatial economy is among the most policy-leveraged thematic exposures available in the Indian listed market today. Three forces are operating in the same direction simultaneously: data-sovereignty regulation that restricts foreign entities from holding full-resolution Indian map data, private-participation liberalisation via the National Geospatial Policy 2022, and structural demand from PM Gati Shakti, BharatNet, Smart Cities, defense modernisation, and the auto-OEM ADAS transition. Each force on its own would be material; the combination creates a rare regulatory wedge favouring domestic incumbents.

Market sizing reads as follows: the geospatial economy is projected at Rs. 63,100 crore by 2025 [Secondary, Mordor / Allied / Business Standard], with subsequent CAGR estimates clustering around 13–15% through 2030. Growth is uneven across the value chain — foundational mapping data is mature and concentrated, downstream analytics and EO-as-a-service are nascent and fragmented, and the satellite layer was effectively closed to private capital until NGP-2022.

ANCHOR FACT · PRIMARY

January 2026: IN-SPACe awarded the national private EO contract.

Pixxel-led consortium — with Dhruva Space, PierSight, and SatSure as partners — won the IN-SPACe national EO PPP. Rs. 1,200 crore allocated; 12 satellites over 5 years; hyperspectral + optical + SAR + multispectral. Losing bids: Astra Microwave + BEL, and GalaxEye + CoreEL (~Rs. 97 crore). This is the single most important data point in the theme — it confirms that the EO private layer is now real, contracted, and concentrated in four pre-IPO names.

1.2 Why the listed surface is thin

There are two reasons the listed surface looks thin relative to the size of the theme. First, the most concentrated capability is still pre-IPO — Pixxel, Dhruva Space, SatSure, PierSight, GalaxEye, Cropin, Garuda Aerospace, and IG Drones have no public DRHP visible as of this write-up. Second, several “obvious” listed exposures are mechanism-free: TCS, Infosys, HCL, Wipro, LTIMindtree, and Persistent all maintain “geospatial / location-intelligence” service practices, but combined revenue from those practices is plausibly under 2% of total revenue at any of them [Secondary, no public segment break-out]. Owning a \$200B IT-services company for a \$50M GIS practice is the canonical analogy-not-mechanism failure mode that PROCESSES.md §5.22 was written to catch.

The same applies to logistics (Delhivery, Blue Dart) and insurance (ICICI Lombard and general insurers). These are GIS consumers — mapping-cost reductions show up as opex savings or product features, not as a revenue line on the income statement. There is no GIS-specific P&L at any of them. Treating them as GIS exposure is the same failure mode in a different costume.

1.3 Scope and source-tier note

This brief builds on the prior MAPMYINDIA governance + GIS×AI deep-research file (/TRADER/03_SCREENERS/260423_DEEP-RESEARCH_mapmyindia-governance-GIS-AI.md) rather than redoing it. It extends the frame outward to the rest of the value chain. The fundamental analysis filter is applied as a light filter, not a hard gate — per operator instruction this is informational/thematic with no actionable picks. §5.24 STRESS_TEST_GATE is therefore not invoked. Web-search coverage was partial: four of approximately six planned searches completed before rate-limiting. Claims downstream of those searches are tier-tagged Secondary or training-knowledge and explicitly flagged.

Part II / The Value-Chain Map

The Indian GIS value chain decomposes into ten layers. For each, the brief asks the same three questions: (1) what is the concrete revenue mechanism that links the layer to the GIS thesis, (2) which listed names — if any — capture that mechanism, and (3) does the cleanest candidate survive a fundamental light-filter today.

Layer A / Mapping-Data Operators

The core of the value chain. Two listed candidates, one structural moat (data sovereignty), and the cleanest mechanism in the theme.

Name	Listing / TRADER-60	Mechanism (concrete revenue line)	Fundamental filter
MAPMYINDIA (C.E. Info Systems)	NSE/BSE · TRADER-60 L5	~80% share Indian auto-OEM embedded maps; Rs. 1,770cr orderbook (Dec 2025); Sol National Geospatial Platform contract; IOCL Rs. 110cr CVTMS [Primary]	PARTIAL PASS / WAIT — chart broken (917<1004 prior swing low); Q3 FY26 fired every fundamental bad-quarter signal
GENESYS INTERNATIONAL	NSE/BSE · GAP	FY26 revenue ~Rs. 318cr (PAT Rs. 39.1cr); Q2 FY26 +10.6% YoY; launched India's first HD ADAS maps covering 1 lakh km of national highways/corridors [Secondary]; smaller but faster-growing peer to MMI; Q3 FY26 had revenue decline + exceptional charges [flag]	WAIT — trajectory right but Q3 exceptional charges impaired the quarter; PE will be elevated post-rerating

CLEANEST ENTRY · LAYER A

Watch GENESYS for clean-quarter re-acceleration.

GENESYS is the harder-to-find peer-replication play; MAPMYINDIA is the bigger moat but already in book at L5. Both fail the fundamental filter's "clean quarter + price not at peak" test right now — this layer is a structural watch, not an immediate buy.

Layer B / Satellite / Earth Observation

ANCHOR FACT · PRIMARY (IN-SPACE + company releases, January 2026)

Pixxel consortium won; BEL+Astra and GalaxEye+CoreEL lost.

Pixxel + Dhruva Space + PierSight + SatSure won the IN-SPACE national EO PPP. Rs. 1,200cr to deploy 12 sats over 5 years, hyperspectral + optical + SAR + multispectral. Astra Microwave + BEL bid lost; GalaxEye + CoreEL bid lost (Rs. 97cr).

Name	Listing / TRADER-60	Mechanism	Notes
Pixxel	Pvt	Hyperspectral leader; consortium prime; Firefly satellites operational	No DRHP visible [tertiary timeline]; IPO-WATCH HIGH
Dhruva Space	Pvt	Smallsat manufacturing + ground stations + integration; consortium partner	No DRHP [flag]; IPO-WATCH
PierSight	Pvt	SAR-focused; consortium partner	No DRHP [flag]; very early-stage
SatSure	Pvt	Earth-observation analytics layer (ag, infra, climate); consortium analytics partner	No DRHP [flag]; IPO-WATCH
GalaxEye	Pvt	Multi-sensor fusion (SAR+optical); LOST EO-PPP bid — no anchor contract	No DRHP [flag]; thesis dented by losing the bid
BEL	NSE/BSE · L3	Onboard electronics for ISRO + defense ISR; lost EO-PPP so NGP-private upside contingent on next contract	WAIT per fundamental discipline — chart elevated, PE 40s; clean governance
Astra Microwave	NSE/BSE · GAP	T/R modules + RF subsystems for satellites + radar; lost EO-PPP but has steady ISRO/MoD revenue [Secondary — flag]	WAIT — likely above DMAs; smallcap PE risk
HAL	TRADER-60 L3	SSLV joint, satellite assembly; tiny share of revenue from sats	DILUTED — own for aero, not for GIS
MTAR Technologies	TRADER-60 L3	Cryo-engine subassemblies + satellite precision components for ISRO	DILUTED but chart broken from peak (mean-reversion zone)
Paras Defence	GAP	Optics for satellites + defense; small pure-play feel	DILUTED + smallcap-PE risk
L&T	GAP	Built launch-vehicle hardware + cryo stages for ISRO; tiny share	DILUTED — too big to own for GIS

CLEANEST ENTRY · LAYER B

No clean listed pure-play exists today.

The mechanism is captured by the four pre-IPO consortium members. Listed “exposure” via BEL / Astra / HAL / MTAR is genuinely diluted — flag explicitly so the analogy-as-mechanism failure mode is avoided. The IPO-WATCH file should be updated with Pixxel, Dhruva, and SatSure as priority names.

Layer C / Drones / Aerial Imagery

Name	Listing / TRADER-60	Mechanism	Fundamental filter
IDEAFORGE Technology	NSE/BSE · GAP	India UAV market leader (~50% share); ZOLT + SWITCH V2 next-gen tactical UAVs; ~340–450 unit Q4 FY26 deliveries; ~Rs. 200B sector pipeline cited [Secondary]	WAIT — post-listing brutal drawdown (chart healing for mean-reversion); profitability still emerging; founder-led smallcap, monitor RPTs
DroneAcharya Aerial Innovations	NSE · GAP	Drone-as-a-Service for surveys + GIS data + DGCA training; smaller cap	CAUTION — SME-graduated, governance scrutiny harder; OPM volatile; Fundamental-discipline default = skip
Zen Technologies	GAP	Defense simulators + UAV systems incl. anti-drone; loose GIS adjacency	DILUTED thematic-fit; not a GIS play
Garuda Aerospace	Pvt	Ag-drones, Make-in-India supplier, Kisan-drone program	IPO timeline murky — no public DRHP confirmed [flag]
IG Drones	Pvt	Surveying + aerial mapping services	No public DRHP [flag]

CLEANEST ENTRY · LAYER C

IDEAFORGE — the only listed pure-play with sector tailwind.

The healing chart helps the fundamental filter's mean-reversion bias; the unprofitability flunks PE-discipline. It belongs on TRADER-60 as a watchlist name, not as an immediate add.

Layers D, E, F / Logistics, Agriculture, Insurance / Climate

Three layers in sequence each warrant an honest empty-or-diluted-set call. Owning them for the GIS thesis is the same analogy-not-mechanism failure mode flagged throughout this brief, in three different costumes.

Layer	Names	Honest call
D — Logistics	Delhivery, Blue Dart	GIS consumers — route-optimization, last-mile geocoding capture operating leverage from mapping-cost reductions. No GIS revenue line in the P&L. Skip the layer for the thesis frame.
E — Agriculture	Cropin (Pvt), SatSure (Pvt — covered Layer B), Skymet (status unclear)	All meaningful pure-plays are pre-IPO. Listed "ag-tech" (UPL, Bayer CropScience, Dhanuka, Insecticides India) is input chemicals, not GIS. Park the layer until a SatSure or Cropin DRHP appears.
F — Insurance / Climate	ICICI Lombard, general insurers	Use satellite-flood / crop indices for parametric products but the GIS share of revenue is invisible. Not a thesis driver.

Layer G / Surveying / Construction-Tech

Name	Listing / TRADER-60	Mechanism	Verdict
L&T	GAP	Won Sol digital-mapping + smart-city work via L&T Smart World	DILUTED — single-digit % of consolidated revenue; not a GIS thesis
Ashoka Buildcon, NCC, KEC, KPIL	GAP	Use GIS for road BOT + transmission projects	DILUTED — thematic only

Honest call: dilute layer. Avoid as GIS-thesis play.

Layer H / IT Services GIS Practices

TCS, INFY, HCLTECH, Wipro, LTIMindtree, and Persistent each maintain a “geospatial / location-intelligence” service line. Combined revenue from those practices is plausibly under 2% of total revenue at any of them [Secondary / training-knowledge — flag, no public segment break-out].

VERDICT • LAYER H

Dilution-grade for the GIS thesis.

This is exactly the failure mode §5.22 flagged on the prior PDT-on-ANGELONE and DC-on-IT-services analogies — owning a \$200B IT-services co for a \$50M GIS practice is mechanism-free. Hold these names for AI-services theses if at all, not for GIS exposure.

Layer I / Infrastructure Enablers (cross-stack with DC)

Name	TRADER-60	Mechanism	Cross-stack note
HFCL	L1 (book wt 16.84%)	Optical fiber + telecom equipment + defense optoelectronics (incl. ISR-adjacent products); fiber backbone enables GIS data transport	Cleanest DC + GIS crossover — already overweight; thesis confirms holding, doesn't add
STLTECH	TRADER-60 L3	Optical solutions + fiber; same logic as HFCL	DC + GIS crossover; smaller / cleaner exposure than HFCL on optical
TEJASNET	TRADER-60 L3	Networking gear; benefits from BharatNet + Smart Cities GIS rollouts	Diluted — broad-telecom thematic; chart was broken (–6.9% week)
POLYCAB / KEI	TRADER-60 L3	Cables — DC adjacency, no GIS-specific revenue	Skip for GIS frame
ANANTRAJ	TRADER-60 L3	DC-pivot story; GIS compute does run on DC infra but GIS-specific revenue absent	DC thesis, not GIS thesis

CLEANEST CROSS-STACK ENTRY • LAYER I

HFCL and STLTECH already capture this.

The GIS angle is additive to their existing DC + 5G + defense theses, not a fresh entry point. The thesis confirms current weights rather than asking for incremental positioning.

Layer J / Defense-GIS

Name	TRADER-60	Mechanism	Fundamental filter
BEL	TRADER-60 L3	ISR systems, satellite payload electronics, EW, mission electronics	Governance clean (PSU); chart elevated; PE 40s; WAIT
Astra Microwave	GAP	Sat RF / microwave (T/R modules, satcom subsystems)	Smallcap, PE elevated; WAIT
Data Patterns	GAP	Defense electronics incl. embedded systems for UAVs + surveillance + sat ground [Secondary — training-knowledge, flag]	High PE (50+), chart had run; CAUTION per the peak-price rule
Paras Defence	GAP	Optics for satellites + defense + space; small pure-play feel	Smallcap-PE + governance still building track-record; CAUTION
HAL	TRADER-60 L3	Sat assembly + launch vehicles; small GIS slice	Diluted
Bharat Forge	GAP	Kalyani Strategic Systems has defense exposure; very thin to GIS	Diluted — skip

Astra Microwave and Data Patterns are the closest gap-fillers if defense-GIS becomes a discrete cluster in the TRADER-60 frame — both flunk the fundamental filter's peak-price gates today, but both deserve to be on a watchlist for a future re-screen.

Part III / Cleanest Entry Points & TRADER-60 Gap Audit

3.1 Cleanest entry per layer

Layer	Cleanest candidate	Why it stands out	Action
A — Mapping data	GENESYS INTERNATIONAL	TRADER-60 gap; faster-grower than MMI	Wait for Q4 FY26 print after Q3 exceptional charges
B — EO satellite	No clean listed pure-play	BEL / Astra / MTAR are diluted	IPO-WATCH for Pixxel + Dhruva + SatSure
C — Drones	IDEAFORGE	Only listed pure-play with sector tailwind	Chart healed but profitability emerging — watchlist not buy-now
D, E, F — Logistics / Insurance / Climate	Honest empty-or-diluted-set	GIS consumers, not producers	Skip as a thesis driver
G — Surveying / construction	L&T (Smart World), Buildcon names	Diluted — single-digit % revenue	Skip as a thesis driver
H — IT services	TCS / INFY / HCL / Wipro / LTIM / Persistent	<2% of revenue from GIS practice	Hold for AI-services thesis if at all, not for GIS
I — Infrastructure enabler	HFCL + STLTECH	Already in book	GIS angle is additive, not a fresh entry
J — Defense-GIS	Astra Microwave + Data Patterns	Closest gap-fillers if defense-GIS becomes a discrete cluster	Both flunk the peak-price gate today

3.2 TRADER-60 GIS-relevant exposure (current)

#	Name	TRADER level	Mechanism note
1	MAPMYINDIA	L5	Core mapping operator
2	HFCL	L1	Fiber + defense optoelectronics
3	STLTECH	L3	Fiber crossover
4	BEL	L3	Defense-ISR adjacency
5	TEJASNET	L3	Networking enabler
6	KPIT	L5	Auto ADAS HD-maps consumer (indirect)
7	HAL / MTARTECH	L3	Sat manufacturing/precision (diluted)
8	ANANTRAJ	L3	DC compute substrate (indirect)
9	TCS / INFY / HCLTECH / PERSISTENT	L4	Diluted IT-services GIS practices

3.3 Notable gaps to consider for next screener-map

- GENESYS INTERNATIONAL — obvious peer to MAPMYINDIA at L5; absent today.

- IDEAFORGE — only listed UAV pure-play; absent.
- Astra Microwave — sat RF; absent (BEL is the only sat-electronics name today).
- Data Patterns — defense electronics incl. UAV / sat ground systems; absent.
- Paras Defence — sat optics pure-play; absent.

3.4 IPO-WATCH additions (priority order)

#	Name	Layer / mechanism	Priority & rationale
1	Pixxel	Hyperspectral; consortium prime	Highest — anchor of national EO consortium
2	Dhruva Space	Smallsat manufacturing + ground stations	High — consortium partner with hardware exposure
3	SatSure	EO analytics (ag, infra, climate)	High — analytics layer of consortium
4	PierSight	SAR-focused EO	Medium — SAR niche, very early-stage
5	GalaxEye	Multi-sensor fusion (SAR+optical)	Lower — lost the EO-PPP bid
6	Cropin	Ag analytics SaaS + EO	Medium — agri layer pure-play
7	Garuda Aerospace	Ag-drones, Make-in-India	Medium — timeline murky

CAVEAT

All seven names lack public DRHPs as of this session.

Timeline = unverified. Treat as multi-quarter watchlist not near-term IPO bets.

Part IV / Falsification & Misconceptions

4.1 Falsification tests (load-bearing claims that could be wrong)

Per research-discipline.md Rule 7, every load-bearing claim in this brief should have a stated falsification condition. The five below are the load-bearing ones — if any were to flip, the corresponding section of the report would need re-writing.

#	Claim	Falsification condition
1	GENESYS is the cleanest mapping-data peer to MMI	If Q4 FY26 + Q1 FY27 prints continue revenue decline / exceptional charges, it becomes a value trap, not a peer-grow story.
2	IDEAFORGE is the only listed drone pure-play	If a new drone IPO (Garuda / IG Drones) lists in the next 12 months with comparable scale and capital efficiency.
3	Rs. 200B drone procurement pipeline materialises	If Q4 FY26 + FY27 actual drone tender awards stay below ~Rs. 40B/year run-rate, exposing the Construction-World framing as PR-grade.
4	BEL / Astra are diluted GIS exposure	If either wins a sole-source NGP-private contract worth >5% of revenue, in which case the GIS share becomes material.
5	Pre-IPO consortium will dominate EO economics	If the 5-year Rs. 1,200cr deployment slips, contracting Pixxel-led equity value before they list.

4.2 Three common misconceptions

"India's GIS boom is a TCS / INFY play."	False. IT services have <2% GIS-related revenue and no segment break-out. Mechanism-free thematic exposure.
"Owning Delhivery captures GIS upside."	False. Delhivery is a GIS consumer; mapping-cost reduction shows up as opex savings, not as a revenue line.
"BEL won the EO-PPP."	False. BEL + Astra lost the bid. Pixxel-led consortium won. Listed defense names get diluted upside, not the EO-PPP economics.

Closing / Source Tier & Notes

5.1 Source-tier summary (research-discipline.md Rule 4)

Tier	What it covers in this brief
Primary	IN-SPACE January 2026 announcement (Pixxel consortium); company IR / Q-results pages where directly cited; Union Budget NGP allocation; Sol NGP platform release.
Secondary	Mordor Intelligence + Allied Market Research market sizing; Business Standard / Construction World / BusinessToday on IdeaForge orders; Genesys investor presentation digests via ackodrive / kotaksecurities / scanx.
Tertiary / training-knowledge (flagged)	Pre-IPO timelines, Astra / Data Patterns ISR revenue mix, IT-services GIS practice share, Q3 FY26 Genesys exceptional-charge specifics.

5.2 Scope limits and analogy caveats

- Pre-IPO DRHP visibility is shallow — for Pixxel, Dhruva, PierSight, SatSure, GalaxEye, Cropin, Garuda Aerospace, IG Drones, no public DRHP confirmed via web search this session. All flagged tertiary / opinion-grade timeline.
- The fundamental analysis filter is applied lightly per operator instruction; no per-name governance deep-dive.
- DC-overlap claim (HFCL / STLTECH live in both stacks) is an extension of the prior DC-beneficiaries write-up, not a fresh primary mechanism — labelled as such.
- §5.24 STRESS_TEST_GATE is not invoked per operator instruction (informational / thematic, no actionable picks).
- Web-search coverage was partial (rate-limited mid-session): claims dependent on the rate-limited searches are tier-tagged Secondary or training-knowledge and flagged in the body text.

5.3 Sources (selected)

- India Geospatial Analytics Market Size — Mordor Intelligence
- Indian geospatial market can grow at 12.8% to Rs. 63,100 cr by 2025 — Business Standard
- Genesys International — Screener.in
- Genesys Q2 FY26 Results — ackodrive.com
- Genesys Q3 FY26 — scanx.trade
- Mapping stock jumps 13% after launching India's first HD ADAS maps — TradeBrains

- IdeaForge Q&A: AI – India's AI — BusinessStandard
- IdeaForge AI – AI – India's AI — BusinessStandard
- IdeaForge Secures Strong Drone Orders — Construction World
- Pixxel-led consortium signs pact with IN-SPACe — BusinessToday
- Pixxel-Led Consortium with Dhruva, PierSight, SatSure — Pixxel.space
