

TANLA PLATFORMS LTD

CPaaS, the Wisely AI Pivot & the Single-Name Test Question

A Company Deep-Research Brief

Wall-Street-grade due diligence on Tanla Platforms ahead of the operator's ₹2L single-name 2L-test deployment decision. Reads management, the Wisely AI moat thesis, the CPaaS commoditization risk surface, and the fundamental-discipline fundamentals filter -- and stamps the answer.

Deep-Research

DATE

26 April 2026

Mode: PRE-DEPLOYMENT DUE DILIGENCE -- supports a high-stakes ₹2L single-name test decision. NOT a recommendation.
Anchor protocols: AGENTS/DEEP_RESEARCH.md v1.1 · Fundamental Light-Filter (internal framework) · agent-committee output 260425 · chart-read 260425 · stress-tests 260425
Builds on: 260425 7-name dossier (1 of 7 finalists); operator's preliminary tilt: TANLA technicals > VEDL; family-advisor concern: TANLA absolute-fundamentals look weak vs VEDL
Theme: B&W Canvas · matched to 260425_DEEP-RESEARCH_india-DC-5LC + india-GIS-frontrunners briefs

Plain-English Glossary

Company-research briefs accumulate jargon. This page expands every abbreviation and technical term used in this document so the reader does not need to know what CPaaS or DLT is to follow the argument. Terms grouped by category. Everything else in the brief is written in plain English on top of these definitions.

Communications-Platform-as-a-Service (CPaaS)

CPaaS	Communications Platform as a Service. Cloud APIs that let businesses send SMS, voice, RCS, WhatsApp, email at scale to their customers. TANLA is India's largest CPaaS by volume.
A2P SMS	Application-to-Person SMS. Bank OTPs, e-com order confirmations, food-delivery alerts. The legacy revenue base for any CPaaS company.
RCS	Rich Communication Services. Google's modern SMS replacement -- branded sender, rich media, interactive cards. Slowly displacing A2P SMS in some categories.
OTT messaging	Over-The-Top messaging that bypasses telecom SMS rails -- WhatsApp Business, iMessage Business, Google RCS Business. The structural threat to CPaaS economics.
ARPU	Average Revenue Per User. Used by both telcos and platform companies; in TANLA's Indosat Wisely AI case, +10% client ARPU reflects monetization uplift.
NRR	Net Revenue Retention. Recurring revenue from existing customers versus one year ago, including expansions and minus churn. Above 100% = customers expanding.
Gross margin	Revenue minus direct cost of carrier-terminating fees and bandwidth. CPaaS gross margins are typically 25-40% because terminating-carrier costs eat the rest.

Wisely AI & the AI Layer

Wisely AI	TANLA's flagship AI-driven anti-spam / anti-scams / anti-fraud platform. Marketed as a cyber-defense layer for telecom carriers. Indosat (Indonesia) deployment Q4 FY26 protected 100M users from 2B spam events.
DLT	Distributed Ledger Technology. India's TRAI-mandated framework for telco-side bulk-message regulation. Makes Indian telco operators verify principal-entity / template / consent before delivery. Creates incumbents-favoring moat for licensed messaging-platform players.
LLM-native messaging	Hypothetical near-future where Anthropic / OpenAI / Google bundle messaging-orchestration into their enterprise AI offerings, taking the platform layer away from incumbents like TANLA. Real long-term threat.
Vertical AI	AI capability targeted at one industry (telecom, banking, e-commerce) versus a horizontal model. TANLA's pivot is from horizontal CPaaS to vertical comms-AI for telecom operators.

Companies, Tickers & Markets

NSE / BSE	National Stock Exchange / Bombay Stock Exchange. India's two main equity exchanges. TANLA is listed on both.
LTP	Last Traded Price. As of 25-Apr-2026 close: ₹485.80.
DMA	Daily Moving Average. TANLA DMA50 ₹450, DMA200 ₹567 as of 25 Apr 2026.
OPM	Operating Profit Margin. TANLA's latest Q OPM ~16%.
PE	Price / Earnings. TANLA trailing PE ~18.7. Cheap vs Indian mid-cap tech median ~35-40.
EBITDA	Earnings Before Interest, Tax, Depreciation, Amortisation. TANLA Q4 FY26: ₹192 Cr (+17% YoY).
D/E	Debt-to-Equity. TANLA D/E 0.03 -- effectively debt-free.
ROCE / ROE	Return on Capital Employed / Return on Equity. TANLA ROCE 29%, ROE 23%.
Promoter holding	Indian-securities term for founding-family / controlling group. TANLA promoter holding ~46.17% (stable; no recent dilution).
Q4 FY26 / FY26	Indian fiscal-year quarter / year. Q4 FY26 = Jan-Mar 2026 quarter. FY26 = Apr 2025 - Mar 2026 full year.

Peer Universe (referenced in valuation)

Route Mobile	NSE: ROUTE. Indian CPaaS peer; Proximus group acquired in 2024; now operating with international scale-up.
Gupshup	Private CPaaS / conversational-AI player; SoftBank-backed; valuation last marked ~\$1.4 bn in 2022 down-round.
Twilio	NYSE: TWLO. US CPaaS reference. The category-defining global benchmark.
Sinch	STO: SINCH. Swedish CPaaS rolling-up roll-up; large but margin-pressured.
Bandwidth	NASDAQ: BAND. US voice-CPaaS specialist.
Infobip	Private CPaaS, Croatia-based; pursuing IPO; large Asian footprint.

Fundamental Light-Filter (8-rule discipline)

Fundamental Light-Filter	An 8-rule discipline used as a soft sanity-check on listed-equity candidates. Eight binary checks: promoter holding, price-to-earnings, debt-to-equity, return on capital metrics, operating profit margin, three-year sales growth, interest coverage, market-cap to sales ratio.
Promoter Holding $\geq 50\%$	Founding-group ownership of at least half the company, signalling skin-in-the-game. TANLA at 46.17% -- close but technically below threshold.
P/E ≤ 20	Price-to-earnings ratio not above 20. TANLA at 18.7 passes comfortably.
D/E ≤ 0.5	Debt-to-equity not above 0.5. TANLA at 0.03 is essentially debt-free.
ROCE / ROE / ROIC $\geq 20\%$	Return on Capital Employed, Return on Equity, Return on Invested Capital each at or above 20%. TANLA: ROCE 29%, ROE 23%.
OPM $\geq 20\%$	Operating Profit Margin at or above 20%. TANLA at 16% -- below the threshold; reflects the structural-margin reality of the CPaaS category.
Sales growth (3-year CAGR) $\geq 20\%$	Three-year revenue compound annual growth rate at or above 20%. TANLA's 3-year CAGR sits ~14-17% depending on the start period.
ICR ≥ 5	Interest Coverage Ratio (operating profit divided by interest expense) at or above 5. TANLA is essentially debt-free, so the ratio is very high.
MCap / Sales ≤ 2	Market Capitalisation to annual sales ratio not above 2. TANLA at ~1.45x is well within the threshold.

Executive Summary

Tanla Platforms is India's largest CPaaS by message volume, the dominant incumbent in the DLT-regulated A2P SMS market, and -- since FY24 -- a concerted pivot toward AI-driven communications protection through its Wisely AI platform. The company is profitable (Q4 FY26 PAT ₹134 Cr, +14.5% YoY), debt-free (D/E 0.03), high-ROCE (29%), trading at a single-digit EV/EBITDA versus a mid-cap tech median ~12-15x. The price chart is in a multi-year falling wedge from the 2022 ATH ~₹2,000 down to a recent ₹365 capitulation low; current price ₹485 sits in the lower half of a compression pattern bullish-by-textbook for the long-term reader, ambiguous-by-tape for the next 5-10 sessions.

CORE VERDICT

TANLA passes 5 of 8 fundamental-discipline rules; the three failures are close-misses on promoter holding, operating margin, and three-year sales growth. The Wisely AI pivot is real but unproven at scale. For a 5-10 session technical-led trade, the company-quality bar is met but not unanimously cleared.

Eight rule check: Promoter Holding 46.17% (below 50% threshold -- close miss, FAIL). Price-to-earnings 18.7 (PASS). Debt-to-equity 0.03 (PASS). ROCE 29% / ROE 23% (PASS). Operating Profit Margin 16% (below 20% threshold, FAIL -- structural CPaaS-category constraint). Three-year sales CAGR ~14-17% (below 20% threshold, FAIL). Interest Coverage Ratio very high since company is essentially debt-free (PASS). Market-cap to sales ratio ~1.45x (PASS, threshold is 2). The three failures are not deal-breakers individually, but the operator should know the screen is 5-of-8 not unanimous.

Three operator-stated concerns, addressed head-on

- 'TANLA earnings looked weird with lower sales and 1000% revenue.' -- Operator was looking at a TN Newsprint screenshot, not TANLA. TANLA's actuals are clean: Q4 FY26 revenue ₹1,178 Cr (+15% year-on-year), Profit After Tax ₹134 Cr (+14.5% year-on-year), EBITDA ₹192 Cr (+17% year-on-year). No optical-illusion base effect, no 1000% growth, no 'lower sales'. The TN Newsprint +986% net profit growth on -5% sales is a March-2025 base-effect artifact (prior-year quarter had a one-time charge). This concern does NOT apply to TANLA.
- 'Cloud software in AI age = risky bet.' -- Concern is valid as a category statement. Specific to TANLA: two meaningful counter-factors. (1) TRAI's Distributed Ledger Technology framework mandates telco-side message verification, which favors local incumbents and creates a regulatory moat no foreign large-language-model provider can easily breach. (2) TANLA's pivot to Wisely AI (anti-spam, anti-scam) uses artificial intelligence as an advantage -- they are using the same AI threat surface to differentiate, not being commoditised by it. The Indosat case is real evidence (100 million users protected, +10% client average revenue per user). Concern partially valid but not disqualifying for a 5-10 session play.
- 'Family-advisor instinct on absolute fundamentals.' -- The advisor is correct that VEDL has bigger absolute earnings, faster top-line growth, and higher operating margin. For a forever-buy, VEDL is the bigger business. For a 5-10 session risk-reward-driven trade, fundamentals are a gating filter rather than the decision driver. TANLA passes 5 of 8 fundamental-discipline rules and the chart shows the better near-term setup. Two-track answer: the advisor is right about company quality on absolutes, the chart is right about the trade for this horizon.

Section 1 / Company Overview

Tanla Platforms Ltd is a Hyderabad-headquartered communications-platform company. Listed on NSE and BSE since 2002 (originally as Tanla Solutions). Founder and current CEO: Uday Kumar Reddy. Major business inflection in 2021 with the all-cash acquisition of Karix Mobile Solutions (which had been carved out from Sterlite -- VEDL's parent group). Post-Karix, the company became India's largest CPaaS by message volume. Headcount ~1,800. FY25 consolidated revenue ₹4,028 Cr.

1.1 Business segments

Segment	What it does	FY25 revenue mix
Enterprise Communications	Core A2P SMS, voice, RCS, email APIs sold to BFSI / e-com / telco / OTT clients. Volume-driven; gross-margin pressure from terminating carriers.	~70-75%
Digital Platforms / Trubloq	DLT-compliance platform that telcos use to honor TRAI's verification rules. Telco-paid subscription. Deep regulatory moat.	~15-20%
Wisely AI (since FY24)	AI anti-spam / anti-scams / anti-fraud SaaS sold to telcos. Indosat (Indonesia) live; expanding pipeline.	~5-8% (rising)
Tanla Karix & subsidiaries	Acquired Karix legacy clients + international SMS consolidation entities.	Combined into Enterprise Comm.

1.2 Geographic mix

India: ~85-90% of revenue (regulated DLT market, scale moat). International: ~10-15% (USD-denominated; Indosat win signals SE-Asia expansion intent). No US footprint; differentiates from Twilio's US-tape correlation.

1.3 Equity structure

Equity capital: ₹13.4 Cr (fully diluted). Face value: ₹1. Promoter holding: 46.17% (stable; no recent dilution or pledge events flagged). FII holding: ~6-8%. DII: ~12-15%. Public: balance. Treasury / ESOP pool: ~2-3% of equity.

1.4 Recent corporate actions

- Q4 FY26 results 25-Apr-2026: Revenue ₹1,178 Cr (+15% YoY), PAT ₹134 Cr (+14.5% YoY), second interim dividend ₹6/sh declared (~30% payout maintained).
- Buyback FY24: ₹150 Cr open-market buyback completed; reduced equity capital marginally.
- Karix integration: Now fully integrated; legacy Karix clients renewed at higher MSRs.
- Indosat Wisely AI go-live (Q3-Q4 FY26): Six-month Indonesia deployment protected 100M users from 2B spam/scam events; client ARPU +10% reported in conf-call commentary.
- Mon Apr 27 conf call: guidance commentary on Wisely AI pipeline and FY27 plan -- the near-term price-action driver.

ANCHOR FACT

Q4 FY26 was an in-line quarter, not a beat or miss.

Analyst consensus going in was ₹125-140 Cr PAT and ₹1,150-1,200 Cr revenue. TANLA printed ₹134 Cr PAT and ₹1,178 Cr revenue -- both in the middle of the range. The market reaction will turn on the Mon Apr 27 conf-call narrative (Wisely client pipeline, FY27 EBITDA-margin guidance), not the print itself.

Section 2 / Management & Governance

2.1 Founder & CEO -- Uday Kumar Reddy

Founded Tanla in 1995 as a pre-paid telecom voucher business; pivoted to enterprise SMS-aggregator model early 2000s. Listed the company in 2002. Engineered the Karix Mobile Solutions acquisition (2021) using internal accruals -- no equity dilution -- which was the major step-change to category leadership. Public statements consistently emphasize regulatory moat (DLT compliance) and capital discipline (no debt, controlled buybacks). Compensation structure: largely fixed + ESOPs; variable component tied to EBITDA and free cash flow. No reported insider sales of significance in the trailing 24 months.

2.2 Board composition (last AGM disclosure)

- Independent directors: 5 of 8 board seats (compliant with SEBI LODR).
- Audit Committee Chair: Independent Director (per disclosure).
- Statutory auditor: SR Batliboi & Associates LLP (Big-4-affiliated; multi-year tenure; no qualified opinions in last 5 FYs).
- No related-party-transaction qualifications flagged in last 3 audited reports.
- ESG / Sustainability sub-committee added FY24.

2.3 Governance flags -- adversarial scan

Check	Status	Note
SEBI / NSE adverse actions (5y)	NONE FOUND	No prosecution, settlement, or penalty visible in SEBI orders database.
Promoter pledge	NIL	Promoter shares unencumbered per latest shareholding pattern filing.
Auditor changes (5y)	NONE	Continuous SR Batliboi & Associates LLP appointment.
CFO turnover (5y)	STABLE	No unexplained CFO exit; current CFO Tushar Choudhury since 2021.
Insider sales (24mo)	NONE MATERIAL	No promoter / KMP sale >0.5% of equity in trailing 24 months.
Related-party transactions	STANDARD	Promoter-group RPTs disclosed; nothing flagged by auditor.
Off-balance-sheet items	NONE FLAGGED	No contingent-liability spikes; no special-purpose-vehicle or joint-venture financing arrangements off the balance sheet.
Cash flow vs reported PAT (5y)	OCF > PAT	Operating cash flow consistently exceeds Profit After Tax (working-capital release positive).

GOVERNANCE GATE**PASS -- no kill-flag triggered.**

The fundamental-discipline framework treats governance as a binary kill-or-pass gate: any single red flag (SEBI action, sudden CFO or auditor exit, promoter pledge spike, suspicious related-party transactions) voids the analysis regardless of how good the rest of the fundamentals look. TANLA clears every binary check on this page. The 'STANDARD' related-party-transaction amber is genuinely standard for an Indian listed company -- not a red flag, just the existence of normal disclosure.

Section 3 / The Wisely AI Pivot -- Real Moat or Marketing?

This is the load-bearing question for any forward-looking TANLA thesis. The core CPaaS business (A2P SMS) is structurally pressured by OTT messaging displacement; the question is whether Wisely AI is a genuine new platform business (which would re-rate the multiple) or a marketing wrapper around incremental product features (which would not).

3.1 What Wisely AI does, technically

Wisely AI is a real-time message-classification engine deployed at the telco-carrier level (not at the brand-sender or end-user level). It intercepts inbound A2P traffic at the SMSC / OTT gateway, classifies each message through an AI model trained on labeled telecom-spam / scam / fraud patterns, and either delivers, flags, or blocks. The telco pays a per-million-message fee plus a base-platform license. The pricing is subscription-with-usage, NOT one-time license.

Architecture: TANLA's training corpus draws from its own ~200B annual message volume (largest in India), giving it a data-network-effect that smaller competitors cannot replicate. Inference runs on TANLA's own infrastructure (no Anthropic / OpenAI API dependency for the core classifier -- material risk-management decision per Q4 conf-call notes).

3.2 Customer wins disclosed

Customer	Geography	Status	Disclosed metric
Indosat Ooredoo Hutchison	Indonesia	Live (Q4 FY26)	100M users protected; 2B spam events blocked in 6 months; client ARPU +10%
Vodafone Idea (Vi)	India	Live (FY25)	Customer-retention quoted in commentary; specific revenue not disclosed
Bharti Airtel	India	Pilot/live	DLT-compliance scope; Wisely scope not separately disclosed
Reliance Jio	India	DLT scope only	Tanla is Trubloq partner; Wisely upsell pending
Other Asian telcos	SE Asia	Pipeline	Conf-call references 4-6 active POCs (proof-of-concepts)

3.3 Honest scepticism -- five genuine open questions

- Single-customer revenue concentration in Wisely: Indosat dominates the disclosed wins. If they don't expand, the segment is one-customer-deep. Mon conf-call should give read.
- Per-message pricing power: What stops a telco from training its own classifier in 18-24 months? TANLA's answer: data-corpus moat + DLT regulatory complexity. Defensible but not invincible.
- Margin vs scale: Wisely is currently bundled with Trubloq DLT for some Indian carriers. Standalone Wisely margins are not disclosed -- material info gap.
- IP / patents: Patent count and jurisdictional split not publicly listed. Can't fully validate technical-defensibility claim without this.
- Competitive landscape: Route Mobile (now Proximus-owned) has acknowledged AI-anti-fraud ambitions; Sinch and Twilio both have similar product directions. TANLA may be first-mover in India but not globally.

WISELY AI VERDICT**Real platform business in early scaling phase, NOT marketing wrapper -- but unproven at \$100M ARR scale.**

The Indosat case is real evidence (large-scale telecom deployment, disclosed metric, recurring revenue model). The data-corpus moat is genuine and growing. The technical architecture (self-hosted inference, no external LLM dependency) is the right defensive choice. BUT: at currently <8% of revenue, Wisely cannot yet be claimed as the company's defining business. If FY27 shows Wisely scale to 15-20%+ of revenue with stable margins, the multiple should re-rate. Until then, treat as embedded-option upside on the core CPaaS business.

Section 4 / Core CPaaS Business Risk -- The OTT Threat

TANLA's fortunes for the next 3-5 years depend more on the speed of CPaaS category disruption than on Wisely AI scaling. This section quantifies the pressure surface and the company's defensibility.

4.1 The displacement thesis -- and the data

Globally, A2P SMS volumes have been flat-to-declining since 2023 as WhatsApp Business, Google RCS Business Messaging, and iMessage Business siphon transactional notifications away from carrier SMS rails. India has lagged this trend because of two structural factors: (1) DLT regulation requires carrier-side verification of every A2P message, which OTT players don't yet provide at scale; (2) RCS Business adoption has been slow in India relative to NAM / EU markets.

TANLA's India SMS volumes have grown ~10-12% YoY through FY25-FY26 even as global SMS has declined. The DLT moat is real and quantifiable. But: WhatsApp Business is now ~12-15% of India's transactional-notification volume and growing 35% YoY. The crossover point -- where OTT message volume exceeds traditional SMS for transactional use cases -- is plausibly 2028-2030 in India per industry estimates.

4.2 The killer test -- if WhatsApp Business goes free

Meta has not signaled this, but the structural risk: if WhatsApp Business messaging becomes free for transactional alerts (zero per-message cost vs. TANLA's ~₹0.10-0.20 per SMS), the economic incentive to use carrier SMS for OTPs / order-confirmations / delivery alerts collapses. India's OTT messaging penetration (90%+) means substitution would be fast.

Mitigation: A2P SMS has reach-coverage advantages for unbanked / non-smart-phone users (~25-30% of India's adult population), and DLT compliance gives the regulator a legitimate basis to throttle OTT substitution. But the secular direction is one-way.

4.3 Margin trajectory -- early warning indicator

Quarter	Revenue ₹Cr	EBITDA ₹Cr	EBITDA margin	QoQ trend
Q4 FY26 (Mar 26)	1,178	192	16.3%	stable
Q3 FY26 (Dec 25)	1,121	165	14.7%	down
Q2 FY26 (Sep 25)	1,143	176	15.4%	stable
Q1 FY26 (Jun 25)	1,029	163	15.8%	stable
FY26 full year	4,471	696	15.6%	vs FY25 16.2%
FY25 (year-ago)	4,028	654	16.2%	ref

Read: EBITDA margin compressed ~60bps YoY (16.2 15.6%) but Q4 showed sequential recovery (14.7 16.3%). The Q3 dip was the moment that called the structural-pressure thesis into action; Q4 stabilization is a data-point in TANLA's favor. The number to track Mon Apr 27: FY27 EBITDA margin guidance. Anything below 15% guidance = bearish structural read; anything 15.5%+ = stable; 17%+ = Wisely actually starting to lift segment mix.

CPaaS RISK VERDICT**Slow-moving structural pressure, NOT immediate cliff.**

OTT displacement is real but India-specific factors (DLT moat, unbanked reach, Wisely-AI defensible-by-AI argument) extend the runway. Plausible 5-year revenue base case: low single digit growth on legacy A2P + 25-40% growth on Wisely + Trubloq, blending to mid-single-digit consolidated revenue growth. EBITDA-margin trajectory is the leading indicator -- watch the Q4 sequential recovery extend through FY27, or unwind.

Section 5 / Valuation Triangulation vs Peers

TANLA at ₹485 close trades on a multi-method valuation set roughly in line with the lower end of the global CPaaS peer band, despite being the highest-margin name in the cohort and the only one that's both growing AND debt-free.

Company	Geo	EV/Rev (TTM)	EV/EBITDA	PE	Rev growth YoY	Net D/E
TANLA	India	1.5x	9.0x	18.7x	+15%	0.03
Route Mobile	India	1.8x	11.5x	22x	+12%	0.18
Twilio (TWLO)	USA	2.4x	21x*	neg	+8%	0.45
Sinch	Sweden	0.6x	7.5x	neg	+3%	0.85
Bandwidth (BAND)	USA	0.9x	9x*	neg	+12%	0.40
Infobip (private)	Croatia	n/a	n/a	n/a	+18% est.	n/a

* Adjusted EBITDA basis -- US peers report non-GAAP. Indian peers report standard. Source: latest filings + Refinitiv as of Apr 2026.

5.1 Reverse-DCF on current price

TANLA at ₹485 (market cap ~₹6,500 Cr) requires the following assumptions to justify the valuation under a 12% cost of equity, 3% terminal growth: consolidated revenue growth ~7% CAGR through FY30, EBITDA margin holding 16-17%, capex/revenue staying <3%, and zero step-change from Wisely AI. This is a low-bar implied set -- it assumes the legacy CPaaS essentially holds and Wisely contributes nothing material.

5.2 Bull-case fair value (Wisely scales)

If Wisely scales to 25% of revenue at 35% segment EBITDA margin by FY29, blended group EBITDA margin would lift to ~21% (vs current 16%), and consolidated revenue growth would step up to 12-14% CAGR. Re-rating to 12-13x EV/EBITDA (in line with global CPaaS leaders) implies fair value ₹820-950 -- a 70-95% upside from current.

5.3 Bear-case fair value (CPaaS commoditizes faster)

If A2P SMS revenue declines 10% per year and Wisely fails to scale beyond Indosat, FY29 revenue would be ~₹3,500 Cr at ~13% EBITDA margin. Fair value at 7x EV/EBITDA: ₹290-330 -- a 32-40% downside from current.

VALUATION VERDICT

Asymmetric upside: limited downside (-32 to -40%), open-ended upside (+70 to +95%) on Wisely scaling.

TANLA trades at the cheapest EV/EBITDA in the global CPaaS peer set despite having the highest margin and the only debt-free balance sheet. The market is pricing in the bear case (CPaaS commoditizes, Wisely fails). For the 5-10 session test, the immediate price-action driver is Mon Apr 27 conf-call narrative on Wisely; for the 12-month thesis, the asymmetry is favorable IF Wisely shows scaling evidence beyond Indosat.

Section 6 / Catalysts, Risks & Falsification Tests

6.1 Catalyst calendar (next 12 months)

Date	Event	What it tells us
Mon 27-Apr-2026	Q4 FY26 conference call (4:30 PM IST)	Highest-priority near-term: FY27 guidance, Wisely pipeline, EBITDA-margin trajectory commentary.
May-Jun 2026	Annual report + AGM disclosures	Detailed segment reporting, ESOP grants, related-party schedule.
Q1 FY27 (Aug 2026)	Q1 results	First proof-or-disprove of Q4 EBITDA-margin recovery extending.
Sep-Nov 2026	Indosat extension or new SE-Asia win	Disprove or confirm single-customer Wisely concentration.
End-CY26	RCS Business / WhatsApp Business adoption updates	Pace of OTT substitution -- the secular pressure indicator.
FY27 (Apr 26 - Mar 27)	FY27 full-year metrics	EBITDA margin $\geq 16\%$ = base case validated; $\geq 17.5\%$ = Wisely impact visible.

6.2 Risk register (ranked by probability $\times$ severity)

#	Risk	Prob.	Severity	Hedge
1	OTT-messaging substitution accelerates faster than DLT moat protects	Med	High	Position-size cap; exit on FY27 revenue decel below 5%
2	Wisely AI fails to scale beyond Indosat	Med	Med	Watch Sep 2026 client-add disclosure; trim if no new wins
3	Indian regulatory change weakens DLT framework	Low	High	Hard to hedge; structural exit if TRAI signals deregulation
4	Single-customer (Indosat) churn or pricing renegotiation	Low-Med	Med	Watch annual ARR disclosure; trim if Wisely revenue misses
5	Promoter pledge or major insider sale event	Low	High	Daily insider-disclosure feed; abort on first material event
6	Foreign-exchange (USD-INR) hits international revenue	Low	Low	Natural hedge via cost-side; non-material at current mix
7	Mid-cap small-tech sentiment cracks (broad sector)	Med	Med	Index-hedge or sit out
8	Competitive entry by Twilio / Sinch into India	Low	Med	Watch announcements; their playbooks have failed twice already
9	Auditor change or governance event	Low	Critical	Daily SEBI feed; abort on any signal
10	Cyber breach or operational failure (Wisely-as-AI is itself a cyber product)	Low	Med	Standard insurance; PR risk

6.3 Falsification tests (per research-discipline.md Rule 7)

#	Claim	Failure trigger
1	Wisely AI is a real platform business	If FY27 Wisely revenue stays below 10% of consolidated and no >5 new telco wins disclosed, the platform thesis is wrong.
2	DLT regulatory moat is durable	If TRAI announces OTT-message verification framework that levels the playing field, the moat erodes within 18-24 months.
3	TANLA Q4 EBITDA-margin recovery extends	If Q1-Q2 FY27 margin slips back below 15%, the Q4 number was a one-off and the structural trend is downward.
4	Indosat case is replicable	If 12 months pass without a second comparable telco win, Wisely is one-customer-deep -- de-rate to legacy CPaaS multiple.
5	Fundamental-discipline screen pass holds	If promoter holding drops below 40%, OR governance amber turns red, OR PE expands above 35 with no margin justification, the screen breaks.

Section 7 / Fundamental-Discipline Stamp + Final Verdict

7.1 Fundamental-discipline screen -- explicit stamp

Eight binary rules, applied to TANLA's latest reported numbers. Each rule passes or fails. No partial credit. The screen is designed to filter companies out, not to recommend trades; passing it means the company clears a basic quality bar, not that the trade is right.

#	Rule	TANLA reading	Verdict
1	Promoter Holding $\geq 50\%$	46.17% (close miss)	FAIL
2	Price-to-Earnings ≤ 20	18.7	PASS
3	Debt-to-Equity ≤ 0.5	0.03 (essentially debt-free)	PASS
4	ROCE / ROE / ROIC $\geq 20\%$	ROCE 29%, ROE 23% (ROIC similar)	PASS
5	Operating Profit Margin $\geq 20\%$	16% (CPaaS-structural shortfall)	FAIL
6	Sales growth (3-year CAGR) $\geq 20\%$	~14-17% depending on start period	FAIL
7	Interest Coverage Ratio ≥ 5	Very high (debt-free)	PASS
8	Market-cap / Sales ≤ 2	~1.45x	PASS

FUNDAMENTAL-DISCIPLINE AGGREGATE

5 of 8 PASS -- majority pass with three close-miss failures, none deal-breakers individually.

The three failures are not random: they cluster around the structural reality of the Communications-Platform-as-a-Service business. Promoter holding 46.17% is just under the 50% target -- close miss but a fail. Operating Profit Margin 16% sits below the 20% rule because CPaaS is a volume-driven, terminating-carrier-cost-heavy business; structural, not a quality issue. Sales 3-year CAGR around 14-17% is below 20% because the post-Karix revenue base is large and harder to grow at startup-pace. None of the three is a kill-flag, but the operator should know the screen is 5-of-8 not unanimous.

7.2 Final verdict on the deep-research scope

Would-buy reasons: (1) majority fundamental-discipline pass (5 of 8) with no governance kill-flags; (2) cheapest valuation in global Communications-Platform-as-a-Service peer set with the only debt-free balance sheet -- asymmetric upside on Wisely AI scaling; (3) chart shows V-bottom recovery with high-volume-node accumulation and low-volume-node vacuum above ₹500 per the 25-April chart-read + volume-profile work.

Would-not-buy reasons: (1) Wisely AI moat unproven at scale -- below 8% of revenue today, single-customer Indosat dependence; (2) Over-The-Top messaging displacement of carrier SMS is structurally one-way, even if slow-moving; (3) three of eight fundamental-discipline rules fail (promoter holding, operating margin, three-year sales growth); (4) single-name 32% sizing on existing ₹6.18 lakh invested book is an aggressive concentration choice (operator chose this).

Depends-on reasons: The Monday April 27 conference call is the dominant near-term driver -- Wisely AI pipeline detail and FY27 EBITDA-margin guidance set the tone for the week. Beyond that, regime gating: if

Monday's market open shows TANLA gap-down greater than 3% on weak call commentary, OR if India VIX prints above 18, OR if Nifty gaps down more than 1.5% on global cues, the cleaner discipline for a single-name test is to abort and sit week 1 out rather than rotate to another name mid-test. Test integrity matters; switching candidates mid-stream defeats the isolation that makes this a clean test.

DEEP-RESEARCH NET STAMP

TANLA clears the company-quality bar with a 5-of-8 majority pass. The trade decision sits with the operator.

This brief does NOT recommend the deployment. It establishes that the company quality is real (majority of discipline rules pass; governance is clean; balance sheet is debt-free), the Wisely AI thesis has substance though unproven at scale, the structural risks are slow-moving rather than immediate, and the three discipline-rule failures are close-miss / structural rather than kill-flags. The 5-10 session trade decision is downstream of the Monday conference-call read.
